

GET ON THE FRONT FOOT

Find your weaknesses before the bad guys do.

► It's time to properly test your IT environment.

DON'T LEAVE YOURSELF EXPOSED

Too many organisations struggle to meet their compliance requirements;

► It's time to get serious about security testing.

GET AUTOMATED

Security testing is typically manual and reactive;

► It's time to automate the process.

SECURITY TESTING SERVICES

Our team of certified and accredited security professionals deliver a full range of security testing services:

Vulnerability Assessment

Breach & Attack Simulation

Penetration Testing

Automated Vulnerability Assessment

Red Piranha is one of only a few security organisations with a fully ISO 27001 certified process to ensure we deliver the highest quality service. We only hire the most experienced security experts with intimate knowledge of the latest vulnerabilities and attack methods to make sure you get the most out of the security testing.

THE PROCESS

Red Piranha has a full service capability across Vulnerability Assessments and Penetration Testing (VAPT). Our Crystal Eye platform also automates the technical aspects of a Vulnerability Assessment to ensure you get compliant and stay compliant with regular scans.

BENEFITS

Ensure compliance

— Understand vulnerabilities

— Establish risk management framework

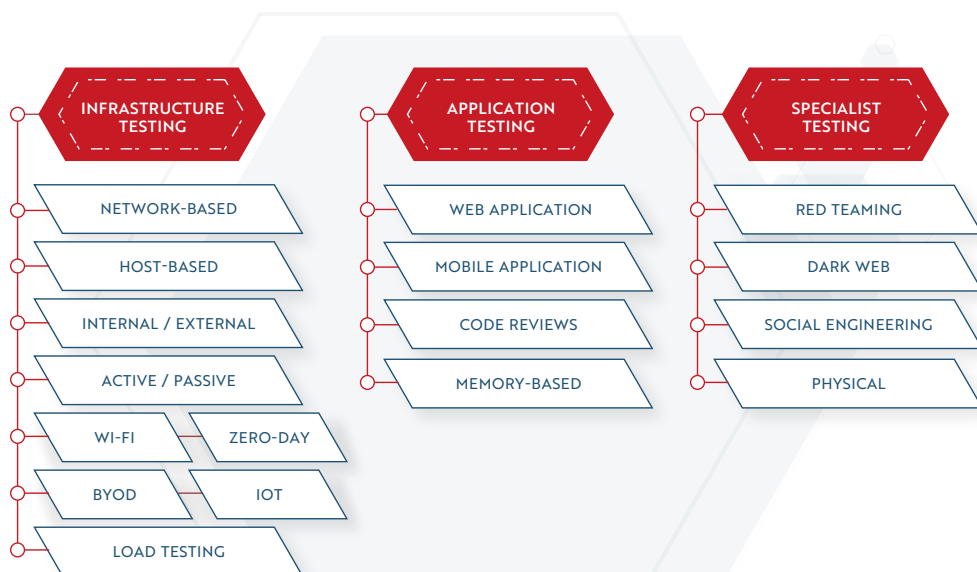

We're helping protect the world from cybersecurity threats by providing automated security solutions for every business, large and small.

SECURITY TESTING

Vulnerability Assessment

A Vulnerability Assessment is a hands-on technical engagement that provides a view of the known vulnerabilities that exist in your network. We identify, quantify, and prioritise vulnerabilities in your IT environment, then help you put a plan in place to mitigate and manage those risks.

Penetration Testing

Penetration Testing takes the next step, testing both known and unknown weaknesses in your environment. Instead of only identifying potential vulnerabilities, the aim is to push things further to uncover whether those vulnerabilities can lead to an actual breach. These results allow us to provide a set of detailed recommendations on how to fix the issues and avoid a security incident.

Breach & Attack Simulation

For a deeper understanding of how secure your network is, we can conduct a series of simulated attacks on your systems in a more orchestrated manner, in what is known as 'breach and attack simulation'. This approach takes the testing to a new level by mimicking an actual multi-pronged attack scenario to gain a clearer understanding of your true security posture in a real-world situation.

Automated Vulnerability Assessment

Our Crystal Eye UTM platform has direct access to the infrastructure within the network so that you can run automated Vulnerability Assessment scans monthly or even weekly to ensure you stay on top of the new vulnerabilities in your environment. Manual security assessments are typically performed once or twice a year; which is a good start; however, new vulnerabilities open up, and new threats are appearing almost daily, leaving you exposed between checks.

COMPLIANCE

Businesses are under increasing pressure to meet a range of compliance requirements, including ISO 27001, which requires regular security assessments. Cybersecurity is an accepted part of today's business climate, and consistent security testing is critical.

PRICING

VAPT services priced based on your requirements. Standard pricing available for Automated Vulnerability Assessments.
